

UNSW Course Outline

SCIF1000 Level 1 Capstone - 2024

Published on the 30 Aug 2024

General Course Information

Course Code : SCIF1000

Year : 2024

Term : Term 3

Teaching Period : T3

Is a multi-term course? : No

Faculty : Faculty of Science

Academic Unit : Faculty of Science

Delivery Mode : In Person

Delivery Format : Standard

Delivery Location : Kensington

Campus : Sydney

Study Level : Undergraduate

Units of Credit : 6

Course Details & Outcomes

Course Description

This first year capstone course allows students to explore how scientific inquiry and interdisciplinary collaboration can address pressing global challenges, generate new knowledge and develop solutions. In this course, students will learn to think like a scientist and tackle real world problems by working in interdisciplinary teams on projects spanning climate change,

public health, to life on other planets. Projects will unite students with shared motivations for pursuing Science and allow students to contribute their disciplinary and personal perspective toward developing a solution. Workshops are designed to provide an opportunity for peer learning and feedback in a collaborative environment.

This course also guides students to reflect on their personal and academic learnings in the first year of their program. Workshops will help students choose their major, explore their professional identity, and consider professional development activities for second and third year. Students will also network with peers and share perspectives and experiences on their study and career goals.

Assumed knowledge: This course is intended for first year students who have completed 24 units of credit toward their Bachelor of Science program. No specific disciplinary knowledge is required. Advanced Bachelor of Science students take the equivalent course, SCIF1001. This course should be taken at the end of your first year of your Science degree, it is designed to improve your skills before you undertake second year studies.

Course Aims

This course aims to:

- **Build Essential Skills:** strengthen key skills needed to transition from first year into higher years of study and for future studies and career.
- **Prepare Students for Future Projects:** learn how to approach larger and more open-ended projects, in preparation for higher years, work-integrated learning (WIL) and research-integrated learning (RIL).
- **Connect Students with Staff and Peers:** interact with teachers and classmates from different study areas, with a focus on engagement and collaboration.
- **Shape Professional Identity:** choose a major and gain experience applying knowledge and experiences to real-world situations.
- **Reinforce Program Learning Outcomes (PLOs):** explore PLOs, the broad set of skills that all Bachelor of Science students should acquire, and gain insight into how PLOs complement disciplinary and personal experience.
- **Explore Science in Society:** learn how science works in different fields and its role in society.

This course will reinforce the core skills crucial for further study and provide a solid foundation for students to apply to more advanced projects and professional experiences in higher years.

Course Learning Outcomes

Course Learning Outcomes
CL01 : Apply the scientific method and project management strategies to effectively address a project brief in a team setting.
CL02 : Critically analyse data, literature, and resources to develop informed solutions for a project brief.
CL03 : Utilise reflective practice in scientific thinking and professional work within an interdisciplinary context.
CL04 : Explain and demonstrate the importance of interdisciplinary approaches in addressing complex issues that impact both science and society.
CL05 : Practice effective teamwork skills, demonstrated by self-management and evaluation of personal and peer performance within a project team.
CL06 : Communicate project plans and outcomes clearly and effectively through oral, written and visual formats, tailored for both expert and general audiences.

Assessment Details

Weekly Project Workbook

Assessment Overview

Each week, during class in Weeks 1-5 and 7-9 (inclusive), you will complete interactive Moodle workbook tasks designed to track and develop your team project. These workbook tasks are integral to documenting your progress and ensuring clarity in your team's approach. Each workbook task will encompass both group and individual components, emphasizing collaboration and disciplinary contributions. Questions will be divided into group response questions and individual response questions, and the grades distributed according to the breakdown below.

- Group Responses: 30% of overall mark
- Individual Responses: 25% of overall mark

These workbook tasks serve to scaffold and support your team in developing a robust project plan, fostering interdisciplinary collaboration, and addressing challenges in data integrity and project impact. They are intended to facilitate learning through practical application of course concepts and prepare you for real-world interdisciplinary teamwork scenarios.

Submission and Feedback:

- Submission: Workbook tasks for Weeks 1-5 are due at the end of Week 5 and workbook tasks for Weeks 7-9 are due in Week 10.
- Weighting: The two workbook task submissions (Weeks 1-5 and 7-9) are weighted equally.
- Feedback: Active feedback will be provided each week during class. Written feedback will be

provided two weeks after submission via the assessment rubric.

Hurdle requirements:

1. To pass the course, all workbooks must be completed and submitted on time. These workbook tasks are critical to maximise learning opportunities and project advancement, and late submissions may impact your team's ability to progress effectively.
2. You must receive a passing mark on all workbooks in order to pass the course.

Course Learning Outcomes

- CL01 : Apply the scientific method and project management strategies to effectively address a project brief in a team setting.
- CL02 : Critically analyse data, literature, and resources to develop informed solutions for a project brief.
- CL03 : Utilise reflective practice in scientific thinking and professional work within an interdisciplinary context.
- CL04 : Explain and demonstrate the importance of interdisciplinary approaches in addressing complex issues that impact both science and society.
- CL05 : Practice effective teamwork skills, demonstrated by self-management and evaluation of personal and peer performance within a project team.
- CL06 : Communicate project plans and outcomes clearly and effectively through oral, written and visual formats, tailored for both expert and general audiences.

Generative AI Permission Level

Simple Editing Assistance

In completing this assessment, you are permitted to use standard editing and referencing functions in the software you use to complete your assessment. These functions are described below. You must not use any functions that generate or paraphrase passages of text or other media, whether based on your own work or not.

If your Convenor has concerns that your submission contains passages of AI-generated text or media, you may be asked to account for your work. If you are unable to satisfactorily demonstrate your understanding of your submission you may be referred to UNSW Conduct & Integrity Office for investigation for academic misconduct and possible penalties.

For more information on Generative AI and permitted use please see [here](#).

Thinking Like a Scientist: Team-Based Learning Activities

Assessment Overview

During weeks 1-5 and 7-9 (inclusive), you will complete pre-class activities covering a range of foundational topics essential for scientific inquiry and professional development. As part of each pre-class activity, you will individually complete an online quiz to assess your understanding of

the material. You will have one attempt for each weekly quiz. You will then repeat the quiz during class individually after group discussions. Content for each quiz will vary each week but will be somewhere between 5-10 questions of variable length (a combination of multiple choice/select an answer and short answer).

At the start of each practical class, you will engage in in-depth discussions with your peers to review and refine your answers from the pre-class quiz. These discussions encourage you to articulate your reasoning and learn from your peers, fostering collaborative learning and a deeper comprehension of the material.

You will then complete the quiz again, individually, to evaluate your shared understanding and application of the topics discussed. The questions for both quizzes come from the same pool of questions, but will not be the same across both quizzes. This iterative approach ensures that you not only grasp theoretical concepts but also develop skills in teamwork, communication, and critical thinking, essential for successful scientific careers.

The team-based learning design ensures you and your team members will be better prepared for the group and individual project-based activities in the rest of the class.

Marks and Feedback: All quizzes are equally weighted. You will receive a score and feedback immediately on your individual pre-class quiz attempt. You will receive a separate score for the quiz during class.

Your final mark for this task will be calculated as an average of the scores in the 6 weeks where you achieve the highest scores (ie, the lowest 2 weekly scores will be dropped). For each week, the final quiz score will be based on the pre-class (70%) and during-class (30%) scores.

Course Learning Outcomes

- CL01 : Apply the scientific method and project management strategies to effectively address a project brief in a team setting.
- CL02 : Critically analyse data, literature, and resources to develop informed solutions for a project brief.
- CL04 : Explain and demonstrate the importance of interdisciplinary approaches in addressing complex issues that impact both science and society.
- CL05 : Practice effective teamwork skills, demonstrated by self-management and evaluation of personal and peer performance within a project team.

Assignment submission Turnitin type

Not Applicable

Generative AI Permission Level

No Assistance

This assessment is designed for you to complete without the use of any generative AI. You are not permitted to use any generative AI tools, software or service to search for or generate information or answers.

For more information on Generative AI and permitted use please see [here](#).

Presenting Your Project

Assessment Overview

In Week 10 of the course, you will present a short (approximately 5-10 minute) project pitch to your peers. This pitch is designed to showcase the importance of your scientific discipline (scientific persona) in addressing your team's interdisciplinary real-world project challenge. The aim is to emphasise the importance of your scientific discipline (scientific persona) in addressing the team's interdisciplinary real-world project challenge. Your presentation should effectively communicate the relevance and contributions of your discipline to the broader project goals. You may use slides, videos, or pre-approved models as part of your presentation . Complete guidelines will be provided in Week 1 and discussed in class during Weeks 7 and 8. Feedback will be provided through a marked rubric on Moodle (after Week 10).

Course Learning Outcomes

- CL06 : Communicate project plans and outcomes clearly and effectively through oral, written and visual formats, tailored for both expert and general audiences.

Other Useful Information

Academic Information

Upon your enrolment at UNSW, you share responsibility with us for maintaining a safe, harmonious and tolerant University environment.

You are required to:

- Comply with the University's conditions of enrolment.
- Act responsibly, ethically, safely and with integrity.
- Observe standards of equity and respect in dealing with every member of the UNSW community.
- Engage in lawful behaviour.
- Use and care for University resources in a responsible and appropriate manner.
- Maintain the University's reputation and good standing.

For more information, visit the [UNSW Student Code of Conduct Website](#).

Academic Honesty and Plagiarism

Referencing is a way of acknowledging the sources of information that you use to research your assignments. You need to provide a reference whenever you draw on someone else's words, ideas or research. Not referencing other people's work can constitute plagiarism.

Further information about referencing styles can be located at <https://student.unsw.edu.au/referencing>

Academic integrity is fundamental to success at university. Academic integrity can be defined as a commitment to six fundamental values in academic pursuits: honesty, trust, fairness, respect, responsibility and courage. At UNSW, this means that your work must be your own, and others' ideas should be appropriately acknowledged. If you don't follow these rules, plagiarism may be detected in your work.

Further information about academic integrity, plagiarism and the use of AI in assessments can be located at:

- The [Current Students site](#),
- The [ELISE training site](#), and
- The [Use of AI for assessments](#) site.

The Student Conduct and Integrity Unit provides further resources to assist you to understand your conduct obligations as a student: <https://student.unsw.edu.au/conduct>

Submission of Assessment Tasks

Penalty for Late Submissions

UNSW has a standard late submission penalty of:

- 5% per day,
- for all assessments where a penalty applies,
- capped at five days (120 hours) from the assessment deadline, after which a student cannot submit an assessment, and
- no permitted variation.

Any variations to the above will be explicitly stated in the Course Outline for a given course or assessment task.

Students are expected to manage their time to meet deadlines and to request extensions as early as possible before the deadline.

Special Consideration

If circumstances prevent you from attending/completing an assessment task, you must officially apply for special consideration, usually within 3 days of the sitting date/due date. You can apply by logging onto myUNSW and following the link in the My Student Profile Tab. Medical documentation or other documentation explaining your absence must be submitted with your

application. Once your application has been assessed, you will be contacted via your student email address to be advised of the official outcome and any actions that need to be taken from there. For more information about special consideration, please visit: <https://student.unsw.edu.au/special-consideration>

Important note: UNSW has a “fit to sit/submit” rule, which means that if you sit an exam or submit a piece of assessment, you are declaring yourself fit to do so and cannot later apply for Special Consideration. This is to ensure that if you feel unwell or are faced with significant circumstances beyond your control that affect your ability to study, you do not sit an examination or submit an assessment that does not reflect your best performance. Instead, you should apply for Special Consideration as soon as you realise you are not well enough or are otherwise unable to sit or submit an assessment.
