UNSW Course Outline

CVEN2303 Structural Analysis and Modelling - 2024

Published on the 28 Aug 2024

General Course Information

Course Code : CVEN2303

Year : 2024

Term : Term 3

Teaching Period : T3

Is a multi-term course? : No

Faculty : Faculty of Engineering

Academic Unit : School of Civil and Environmental Engineering

Delivery Mode : In Person

Delivery Format : Standard

Delivery Location : Kensington

Campus : Sydney

Study Level : Undergraduate

Units of Credit : 6

Useful Links

Course Details & Outcomes

Course Description

This course introduces students to structural analysis and computer modelling of structures. It explains the theory and physics behind existing computer software that are used for the analysis of complicated structures. It also provides students with a better understanding of the structural

behaviour of beams, frames and trusses under different loading conditions. The tools and knowledge gained in this course are essential for the design of structures. The topics that are covered in this course include revision of statics with emphasis on drawing internal forces diagrams; conjugate beam method, energy of structures, principles of virtual work; force (flexibility) method; stiffness method; and moment distribution method applied to continuous beams.

Course Aims

The aim of this course is to introduce students to the fundamental concepts and principles applied by engineers in the analysis and design of structures. We will build upon the mathematics, physics, statics and mechanics of solids courses to address and understand the behaviour of trusses, beams and frames. Also, the course aims to engage students in the formulation and resolution of open-ended, design-type exercises, thereby bridging the divide between scientific theories and engineering practice.

Course Learning Outcomes

Course Learning Outcomes
CLO1 : Describe structural behaviour and structural indeterminacy.
CLO2 : Apply principles of work and energy in structural analysis to estimate deformations of structures.
CLO3 : Analyse statically indeterminate structures such as continuous beams, trusses, and frames using the force and displacement methods and the moment distribution method.
CLO4 : Draw internal force and moment diagrams in statically indeterminate structures.
CLO5 : Solve large degree of freedom systems using the stiffness method.

Course Learning Outcomes	Assessment Item

Assessments

Assessment Structure

Assessment Item	Weight	Relevant Dates
Weekly Assignments Assessment Format: Individual	27%	Start Date: Week 1 Due Date: Monday 11.55pm Weekly
Quiz Assessment Format: Individual	15%	Start Date: 08/10/2024 06:00 PM
Lab assignment Assessment Format: Individual	8%	Start Date: Friday Week 5 Due Date: Week 10: 11 November - 17 November
Final Exam Assessment Format: Individual	50%	Due Date: UNSW Final Exam Period

Assessment Details

Weekly Assignments

Assessment Overview

Nine assignments will be available online on Moodle. They need to be submitted online by the due date shown on Moodle.

Course Learning Outcomes

- CLO1 : Describe structural behaviour and structural indeterminacy.
- CLO2 : Apply principles of work and energy in structural analysis to estimate deformations of structures.
- CLO3 : Analyse statically indeterminate structures such as continuous beams, trusses, and frames using the force and displacement methods and the moment distribution method.
- CLO4 : Draw internal force and moment diagrams in statically indeterminate structures.
- CLO5 : Solve large degree of freedom systems using the stiffness method.

Detailed Assessment Description

These assignments will keep you up-to-date with the course material, and will encourage you to practice some problems on a weekly basis. Each assignment includes a number of questions. Only the final answer is needed and it is checked online. You have the chance to attempt the solution as many times as you want to get a full mark of each assignment.

Assessment information

If you do not submit any of the Weekly Assignments, you will lose the 3 marks allocated to that assignment.

Assignment submission Turnitin type

This is not a Turnitin assignment

Generative AI Permission Level

No Assistance

This assessment is designed for you to complete without the use of any generative AI. You are not permitted to use any generative AI tools, software or service to search for or generate information or answers.

For more information on Generative AI and permitted use please see [here](#).

Quiz

Assessment Overview

The quiz will be assessed on the basis of technical accuracy of calculations and evidence of good engineering judgment. The entire solution procedure will be marked and not just the final answers.

Course Learning Outcomes

- CLO1 : Describe structural behaviour and structural indeterminacy.
- CLO2 : Apply principles of work and energy in structural analysis to estimate deformations of structures.

Detailed Assessment Description

The mid-term exam will be held under open book conditions. The exam will be held online through Moodle and students will upload their handwritten working (physical or digital ink) for marking. No spreadsheets or other material will receive marks, students must demonstrate their knowledge in writing.

Assessment Length

90 minutes

Assessment information

The mid-term exam will be on Week 7.

Assignment submission Turnitin type

Not Applicable

Generative AI Permission Level

No Assistance

This assessment is designed for you to complete without the use of any generative AI. You are not permitted to use any generative AI tools, software or service to search for or generate information or answers.

For more information on Generative AI and permitted use please see [here](#).

Lab assignment

Assessment Overview

The assessment is based on a video of the lab simulation of truss structures. The assignment will give you the chance to see the actual testing of a truss, and to compare theoretical calculations with experimental measurements taken in the laboratory. The video of the test will be available to view at your convenience.

Course Learning Outcomes

- CLO1 : Describe structural behaviour and structural indeterminacy.
- CLO2 : Apply principles of work and energy in structural analysis to estimate deformations of structures.
- CLO3 : Analyse statically indeterminate structures such as continuous beams, trusses, and frames using the force and displacement methods and the moment distribution method.
- CLO4 : Draw internal force and moment diagrams in statically indeterminate structures.

Detailed Assessment Description

In this assignment, you are expected to calculate axial forces of a Warren truss and a basic Roof truss using the stiffness method, and then to compare with experimental results. The test videos can be watched on moodle. A guide for using Matlab (optional) is also available on moodle.

Assignment submission Turnitin type

This assignment is submitted through Turnitin and students can see Turnitin similarity reports.

Generative AI Permission Level

No Assistance

This assessment is designed for you to complete without the use of any generative AI. You are not permitted to use any generative AI tools, software or service to search for or generate information or answers.

For more information on Generative AI and permitted use please see [here](#).

Final Exam

Assessment Overview

The final exam will be 2 hours in length and content from all weeks may be examined.

Course Learning Outcomes

- CLO1 : Describe structural behaviour and structural indeterminacy.
- CLO2 : Apply principles of work and energy in structural analysis to estimate deformations of structures.
- CLO3 : Analyse statically indeterminate structures such as continuous beams, trusses, and frames using the force and displacement methods and the moment distribution method.
- CLO4 : Draw internal force and moment diagrams in statically indeterminate structures.
- CLO5 : Solve large degree of freedom systems using the stiffness method.

Detailed Assessment Description

The final exam will be held under open book conditions. No electronic devices will be allowed during the exam, except for the UNSW approved calculators. Please print out the digital notes if any.

Assessment Length

120 minutes

Assignment submission Turnitin type

This is not a Turnitin assignment

Hurdle rules

A mark of at least 40% in the final examination is required before the class work is included in the final mark.

Generative AI Permission Level

No Assistance

This assessment is designed for you to complete without the use of any generative AI. You are not permitted to use any generative AI tools, software or service to search for or generate information or answers.

For more information on Generative AI and permitted use please see [here](#).

General Assessment Information

Grading Basis

Standard

Requirements to pass course

A mark of 40% or greater in the final exam is required to pass the course. Marks from other assessments will only contribute to the final grade if this hurdle is met.

Please reach out to the course convener during the term if you feel you are struggling with the course content and assessments, I want you all to succeed and would like to help you early to prepare for the final exam.

Course Schedule

Teaching Week/Module	Activity Type	Content
Week 1 : 9 September - 15 September	Topic	Introduction. Structural analysis and design. Revision of internal forces diagrams. Statically determinate structures. Statically indeterminate structures.
Week 2 : 16 September - 22 September	Topic	Conjugate beam method.
Week 3 : 23 September - 29 September	Topic	The principle of work – Deformations in statically determinate structures.
Week 4 : 30 September - 6 October	Topic	Force/Flexibility method for statically indeterminate trusses.
Week 5 : 7 October - 13 October	Topic	Force/Flexibility method for statically indeterminate frames.
Week 6 : 14 October - 20 October	Other	Mid-Term break
Week 7 : 21 October - 27 October	Topic	Principles of stiffness analysis in trusses.
	Assessment	6pm Tuesday - Mid term quiz
Week 8 : 28 October - 3 November	Topic	Thermal changes and fabrication errors in trusses.
Week 9 : 4 November - 10 November	Topic	Stiffness analysis in Frames.
Week 10 : 11 November - 17 November	Topic	Moment Distribution Method.
	Assessment	Lab assignment.

Attendance Requirements

For courses with Workshops and/or Labs, attendance for those classes is a necessary part of the course. You must attend at least 80% of the workshop/lab in which you are enrolled for the duration of the session.

Other Useful Information

Academic Information

I. Special consideration and supplementary assessment

If you have experienced an illness or misadventure beyond your control that will interfere with your assessment performance, you are eligible to apply for Special Consideration prior to, or within 3 working days of, submitting an assessment or sitting an exam.

Please note that UNSW has a Fit to Sit rule, which means that if you sit an exam, you are declaring yourself fit enough to do so and cannot later apply for Special Consideration.

For details of applying for Special Consideration and conditions for the award of supplementary assessment, please see the information on UNSW's [Special Consideration page](#).

II. Administrative matters and links

All students are expected to read and be familiar with UNSW guidelines and polices. In particular, students should be familiar with the following:

- [Attendance](#)
- [UNSW Email Address](#)
- [Special Consideration](#)
- [Exams](#)
- [Approved Calculators](#)
- [Academic Honesty and Plagiarism](#)
- [Equitable Learning Services](#)

III. Equity and diversity

Those students who have a disability that requires some adjustment in their teaching or learning environment are encouraged to discuss their study needs with the course convener prior to, or at the commencement of, their course, or with the Equity Officer (Disability) in the Equitable Learning Services. Issues to be discussed may include access to materials, signers or note-takers, the provision of services and additional exam and assessment arrangements. Early notification is essential to enable any necessary adjustments to be made.

IV. Professional Outcomes and Program Design

Students are able to review the relevant professional outcomes and program designs for their streams by going to the following link: [https://www.unsw.edu.au/engineering/student-life/
student-resources/program-design.](https://www.unsw.edu.au/engineering/student-life/student-resources/program-design)

Note: This course outline sets out the description of classes at the date the Course Outline is published. The nature of classes may change during the Term after the Course Outline is published. Moodle or your primary learning management system (LMS) should be consulted for the up-to-date class descriptions. If there is any inconsistency in the description of activities between the University timetable and the Course Outline/Moodle/LMS, the description in the Course Outline/Moodle/LMS applies.

Academic Honesty and Plagiarism

UNSW has an ongoing commitment to fostering a culture of learning informed by academic integrity. All UNSW students have a responsibility to adhere to this principle of academic integrity. Plagiarism undermines academic integrity and is not tolerated at UNSW. *Plagiarism at UNSW is defined as using the words or ideas of others and passing them off as your own.*

Plagiarism is a type of intellectual theft. It can take many forms, from deliberate cheating to accidentally copying from a source without acknowledgement. UNSW has produced a website with a wealth of resources to support students to understand and avoid plagiarism, visit: student.unsw.edu.au/plagiarism. The Learning Centre assists students with understanding academic integrity and how not to plagiarise. They also hold workshops and can help students one-on-one.

You are also reminded that careful time management is an important part of study and one of the identified causes of plagiarism is poor time management. Students should allow sufficient time for research, drafting and the proper referencing of sources in preparing all assessment tasks.

Repeated plagiarism (even in first year), plagiarism after first year, or serious instances, may also be investigated under the Student Misconduct Procedures. The penalties under the procedures can include a reduction in marks, failing a course or for the most serious matters (like plagiarism in an honours thesis or contract cheating) even suspension from the university. The Student Misconduct Procedures are available here:

www.gs.unsw.edu.au/policy/documents/studentmisconductprocedures.pdf

Submission of Assessment Tasks

Work submitted late without an approved extension by the course coordinator or delegated authority is subject to a late penalty of five percent (5%) of the maximum mark possible for that assessment item, per calendar day.

The late penalty is applied per calendar day (including weekends and public holidays) that the assessment is overdue. There is no pro-rata of the late penalty for submissions made part way through a day. This is for all assessments where a penalty applies.

Work submitted after five days (120 hours) will not be accepted and a mark of zero will be awarded for that assessment item.

For some assessment items, a late penalty may not be appropriate. These will be clearly indicated in the course outline, and such assessments will receive a mark of zero if not completed by the specified date. Examples include:

- Weekly online tests or laboratory work worth a small proportion of the subject mark;
- Exams, peer feedback and team evaluation surveys;
- Online quizzes where answers are released to students on completion;
- Professional assessment tasks, where the intention is to create an authentic assessment that has an absolute submission date; and,
- Pass/Fail assessment tasks.

Faculty-specific Information

[Engineering Student Support Services](#) – The Nucleus - enrolment, progression checks, clash requests, course issues or program-related queries

[Engineering Industrial Training](#) – Industrial training questions

[UNSW Study Abroad](#) – study abroad student enquiries (for inbound students)

UNSW Exchange – student exchange enquiries (for inbound students)

UNSW Future Students – potential student enquiries e.g. admissions, fees, programs, credit transfer

Phone

(+61 2) 9385 8500 – Nucleus Student Hub

(+61 2) 9385 7661 – Engineering Industrial Training

(+61 2) 9385 3179 – UNSW Study Abroad and UNSW Exchange (for inbound students)

School Contact Information

For assistance with enrolment, class registration, progression checks and other administrative matters, please see [the Nucleus: Student Hub](#). They are located inside the Library – first right as you enter the main library entrance. You can also contact them via <http://unsw.to/webforms> or reserve a place in the face-to-face queue using the UniVerse app.

For course administration matters, please contact the Course Coordinator.

Questions about this course should normally be asked during the scheduled class so that everyone can benefit from the answer and discussion.
